MIZORAM UNIVERSITY, TANHRIL: AIZAWL
2020

HIGHER AND TECHNICAL INSTITUTE, MIZORAM

CHANMARI, LUNGEI – 796701

CERTIFICATE

This is to certify that R. Vanlawma and C. Sangthanmawia has fully completed the project entitled, "Student Information Management System" in order to meet the requirement of the Mizoram University for the VI Semester Bachelor of Computer Application in the year 2020 (January-August). It is to certify that all the corrections/suggestions indicated for internal assessment has been incorporated in the project. The project report has been approved as it satisfies the academic requirements in respect of the Project work prescribed for the BCA course.

2020

ACKNOWLEDGEMENT

With a sincere heart we express our gratitude to all who have supported us in order to accomplish our project and make it a reality. We are obligated to say thanks to the following persons for their support and directions.

Firstly, we would like to give thanks to God for His guidance all throughout the processing period of our project. With a grateful heart we thank and acknowledge God, for without Him we would not be able to accomplish this project of ours. He has given us the knowledge, wisdom and good health we needed for making this project into a reality.

We thank to our Principal Mr.Vuansanga Vanchhawng. We thank him for the support, encouragement and permission which we enjoy freely in order to accomplish our project.

Our heartfelt gratitude goes to Mr.H.Lalruatkima, Project Guide and Mr.K.Lalmuanpuia, Head of Department in Department of Computer Science, Higher and Technical Institute, Mizoram for their continual advice, backup, confidence, patience and their encouraging words which gives us courage and confidence without which we would be nowhere.

We thank all the people in the department of Computer Science for being always available and helpful over the semester.

Last but not the least; we thank our parents for their moral support and encouragement.

R.Vanlawma

C.Sangthanmawia

VI Semester BCA

Higher and Technical Institute, Mizoram

ABSTRACT

The project report includes the description and implementation of “Student Information Management System” which deals with the management of student data by the user which can be used in the windows as stand alone. It also deals with maintaining student marks detail and their semester performances. To accomplish this, we used Visual Studio 2019 as the front-end and Microsoft Access 2016 as the back-end.

The Administrator(user) will save and update necessary information of students and save it in the database,

This project is developed using Microsoft Visual Studio 2019 (for the frontend) and Microsoft Office Access 2016 (for the backend) as the database system which plays a vital role in this Project. Therefore, it can be implemented on computers running on Windows OS. The interface and the design of the software have been made in the simplest way for the better understanding of the users.

With the help of this Project, the management of student data can be easily done, faster and reliable than before.

DECLARATION

We do hereby that the project entitled “Student Information Management System” is not submitted to any other university or institution for the award of any degree, diploma or fellowship or published any time before. This project is prepared under the guidance of our project guide Mr. H.Lalruatkima which forms our partial fulfilment of the requirements for the three years Bachelor Degree in Computer Applications of Mizoram University.

1. INTRODUCTION

CONTENT

1.1 Overview of the project

1.2 Objectives of the project

1.3 Scope of the project

STUDENT INFORMATION MANAGEMENT SYSTEM

1. INTRODUCTION

This project mainly focuses on Student Information Management System of HATIM college in which all the student data can manage in a proper manner and the user can manipulate the student data whenever it is needed, and also from this software the student marks and their performances can be checkout. This software is designed specifically for the Department of Computer Sciences HATIM and is not meant for mass production.

1.1 Overview of the Project

1. This software is designed to manage the student data.
2. It is designed to facilitate the problem of managing student data.
3. It is meant to be simple and user friendly.
4. It will record all the details of the student data and information of the alumni as well.

1.2 Objectives of the Project

The main objective of this project is to design and develop a simple and understandable Student Information management System. This will help in recording and checking student data easily instead of using pen and paper for managing student data and manipulating student data will be done easily and faster.

This project focus on the need of a better Student Information management System by making used of computer-based applications and database system. The objectives of the project are as follows:

- To provide easy and efficient student data for the user.
- To give faculty the opportunity to check the particular student data.
- To provide the performance of the student marks in each semester.
- To register every data of the student both current student and alumni.
- And finally make improvements to the software as required by the College.

STUDENT INFORMATION MANAGEMENT SYSTEM

1.3 Scope of the project

The scope of the covers the necessary fields that are required steps for the Student Information Management System Graphical User Interface (GUI) based application using Visual Studio 2019 and a database system using Microsoft Access.

The main Scope includes the following:

- A database system which consist of records of the necessary student data and information like login table, register table, back paper table and result table. This database is connected to the application which can be updated, deleted and altered from the application.
- Register page are for recording student data like personal information, university related information, academic performance, back paper information, semester result information and job-related information.
- Register page include updating student data in case of inserting wrong data and even the student data can be deleted from the register page.
- Student view page consist of personal information, university related information, academic performance, back paper information, semester result information and job-related information.
- Student view page include printing the data of batch wise.

STUDENT INFORMATION MANAGEMENT SYSTEM

2. SYSTEM ANALYSIS

2.1 Hardware requirements

This project is designed in order to be used by the faculty and Head of Department. Hence, the hardware specification and requirements are not high. The basic configuration requires are as follows:

- Colored monitor.
- Processor-Pentium IV and above.
- RAM 256MB and above.
- Secondary memory (32GB and above)
- QWERTY or IBM compatible keyboard.
- Optical mouse.

2.2 Software requirement specification

The software required for making the application and for designing the database are as follows.

- Microsoft Visual Studio 2019.
- Microsoft Access 2016 / My SQL.

University-related Information tab: From this tab the user can register university related information of the student.

A screenshot of the 'University-related Information' tab in the SIMS v.1 application. The tab is part of a registration process, indicated by the 'Registration' header at the top left. The main content area is titled 'University-related Information' and contains the following fields:

Batch No	9
Year of Batch	2015-2018
Department	BCA
University Roll No	1523BCA078
University Registration Number	1501815
ID Number	9b3
Current Status	Alumnus

A note below the status field states: "Note: If you select Present Student Job-related Information will disappear. If you select Alumnus Backpaper related Information will disappear." At the bottom of the screen, there are 'Back', 'Update', and 'Next' buttons.

STUDENT INFORMATION MANAGEMENT SYSTEM

3.2 Database Design

The Backend of the project is created by using Microsoft Access – a pseudo relational database system. A database is created first which consists of four different record or tables. These records store the necessary data and information in different fields according to the input of the user. The backend can be connected from the frontend – Visual studio 2019.

3.2.1 Database Table layouts

The database table layouts for different tables are shown below:-

Table Name - Login

	Field Name	Data Type
1	ID	AutoNumber
	Username	Short Text
	Pass	Short Text
	Security	Short Text

Table 1: Login

5. TESTING AND IMPLEMENTATION

CONTENT

5.1 Testing of the software

5.2 Possible problems

5.3 User Guide

5. TESTING AND IMPLEMENTATION

5.1 Testing of the software

This software has undergone many series of tests, and errors present in the software have been dealt with. But there may be some unforeseen errors which are however unlikely. But the software will not crash as it has multiple exception cases. With the amount of time we have, we believe to have done a good job and as far as looks are concerned we are confident that our software has reached our expected mark.

5.2 Possible Problems

There are several problems present within the software; logical errors like trying to insert the word instead of the number, but exception message will pop up instead of crashing the system. Other problems may include the error caused when trying to use ‘ ; ’ (semicolons) in inserting the student data.

5.3 User Guide

The software package can be installed into the computer system if these requirements are met and if the system is running on Microsoft Windows 7 or higher operating system

The installation procedures are as follows:-

1. Insert the ‘SIMS’ CD inside the CDROM drive.
2. Double click on the setup.exe icon to run the installation.
3. A pop-up window will appear giving the necessary information to the user before the installation. Click ‘OK’ to proceed.
4. The next window will ask you to choose the destination folder in which the software should be installed. Click on the setup icon to start the installation.
5. Click ‘Continue’ on the next window. This will install the software to the desire folder.
6. After the installation is finished, a message box will appear notifying that the setup was completed successfully. Click ‘OK’ to close the setup process. The application will be ready to be used.

6. DRAWBACKS AND LIMITATION

This project is undertaken with careful analysis to meet the given criteria of this final project. Corrective measures have been taken. But our insufficiency of knowledge, skill and experience, this project definitely has its own limitations and drawbacks. It definitely cannot have a wide scope as found in other big projects due to the limitation of time. It is primarily a compilation of only what information we thought would be relevant to satisfy the basic requirements of the project.

The project cannot cover the management system of all the institutions as it requires much more time and effort which is not feasible looking at our current course duration. The information gathered are based on Higher And Technical Institute Mizoram, Lunglei and the details of the information gathered are very limited as this is our only source of information. The project is designed and carried out with this source and our base and the administration information of other institution are not included. Therefore, the management in this project offered may not be the same with other institution.

Also, manually entering the student information to the software form might take a long time (depending on the number of student). Addition of student information (other than the existing information on the form) is not possible.

STUDENT INFORMATION MANAGEMENT SYSTEM

7.FUTURE ENHANCEMENT

7.1 Future implementation and advantages

As this is a computer-based application, looking at the rapid growth and development will increase and at the same time the need and creation of such an application will increase more and more. The application can be utilized better if it is maintained and updated properly. The database designed and structure can be enhanced and enlarged for recording more information and data. This type of application can be used for long period even in the future as the usage of internet and web-based application is increasing, it can be developed and enhanced to be used with networking facilities.

The increase usage and popularity of computer-based application will be a major advantage for the application of such a college/university system. The computerized revolution of many applications including the administration system will increase the need and implementation of maintaining the management in this level. This project is undertaken with the intentions of automation the traditional and futuristic outlook which requires a lot of time and efforts. This will be very useful tool for the office departments as it covers the main criteria for maintaining and managing all the necessary works in these fields. This project is design with the view of future implementation and enhancement as it is an application that would not be outdated easily even in the future.

In future days to come we are trying to link the database with the college official website to store the alumni and the student's information, that is why we are trying to collect the student's information as much as possible. All the adding fields are added in the web based so that the alumni and present student can fill up their information in the form from wherever they are, implementing with the web based is the main aim in future enhancement.

As it is developed using Microsoft Visual Studio 2019 and Microsoft Access 2016, it will be compatible to be used in the operating system most widely used in windows OS. Thus, it will have no problems in the installing and compatibility errors on the platform side. It is created in such a way that even normal people will be able to understand and use. So, the user interface made as user friendly as possible. As, the requirement increase and as the criteria increases, it is flexible to be upgraded and used with the demanding needs in the future.

STUDENT INFORMATION MANAGEMENT SYSTEM

7.2 Upgrades

As this project is carried out in a limited time and limit skill, there are many areas in which the software can be upgraded. The scope of the application can be extended to cover not only reservation systems for college/university also those private college and government college and university. The scope of the available management and documentation could also be enlarged if connected with multiple computers as networks. The database design can be enhanced and can be enlarge to create larger and bigger and more reliable database system and application. The design can be improving to covers more fields and more new options. It can be use more efficiently and more useful when upgraded and enhance better to widen the scope and application.

The scope and approach for the software is currently confined to be used for individual user. This can be upgraded to a multiuser application by adding the networking facilities for different users to connect to each other. This will greatly simplify the work and will make it more efficient.

The upgradation and enhancement are not too much required from the hardware point of view. This type of computer application could be run and implemented in almost any type of computer systems available today. Thus, the main upgradation needed is from the software design and approach. However, the computer system needs to be secure and safe to resist malicious attack.

STUDENT INFORMATION MANAGEMENT SYSTEM

8. CONCLUSION

This project is basically designed to be used for the Department of Computer Sciences HATIM. This chapter seeks to conclude the work that has been done, and to present the areas that mark to the completion of this project work.

This project work is the compilation of our ideas, views and thoughts. In doing this project and the development of our thoughts and ideas, we have benefited a great deal from our interaction with our teachers and friends. We extend our sincere thanks to them.

We are deeply conscious of the fact that this project would neither have been undertaken nor pursued and completed but for the tremendous support that we received from Mr. H. Lalruatkima, our project guide and K. Lalmuanpuia Head of Department, who undertook all the responsibilities ungrudgingly during this project work and encouraged in the preparation of this work.

We would like to place and record our sincere thanks and gratitude to our Principal, Mr. Vuansanga Vanchhawng, for extending his full support and consent to this project undertaken.

This project is done and presented in such a way that it can be manage the data and information for the operator efficiently and easily. This is a very painstaking work; however, we tried our best to satisfy the needs of this project. With much effort this project has come into being even though we are conscious of our limited knowledge and skill. But it would be our request that this project we have undertaken, be dealt with much consideration and acknowledgement.
