

2013

(3rd Semester)

BACHELOR OF COMPUTER APPLICATION

Paper No. : 301

(Data Structures using C)

(PART : A—OBJECTIVE)

(Marks : 25)

The figures in the margin indicate full marks for the questions

SECTION—A

(Marks : 15)

1. Tick (✓) the correct answer of the following : 1×10=10

(a) Two main measures for the efficiency of an algorithm are

(i) processor and memory ()

(ii) complexity and capacity ()

(iii) time and space (✓)

(iv) data and space ()

(b) Which of the following is not a linear data structure?

(i) Array ()

(ii) Linked list ()

(iii) Stack ()

(iv) Tree (/)

(c) When a new element is inserted in the middle of a linked list, then

(i) only the elements that appear after the new element need to be moved ()

(ii) only the elements that appear before the new element need to be moved (/)

(iii) the elements that appear before and after the new element need to be moved ()

(iv) None of the above ()

(d) A linear list in which elements can be added or removed at either end but not in the middle is called

(i) queue ()

(ii) deque (/)

(iii) stack ()

(iv) circular queue ()

(e) A pointer which does not contain a valid address is called a

(i) dangling pointer ()

(ii) garbage pointer ()

(iii) null pointer ()

(iv) void pointer ()

(f) A full binary tree with n leaves contains

(i) $\log 2n$ nodes ()

(ii) n nodes ()

(iii) $2n + 1$ nodes ()

(iv) $2n - 1$ nodes ()

(g) A complete binary tree of level 5 has

(i) 15 nodes ()

(ii) 63 nodes ()

(iii) 25 nodes ()

(iv) 30 nodes ()

(h) Which of the following is useful in traversing a given graph by DFS?

(i) Stack ()

(ii) Set ()

(iii) Queue ()

(iv) List ()

(i) The five items A, B, C, D and E are pushed in a stack, one after the other starting from A . The stack is popped four times and each element is inserted in a queue. Then two elements are deleted from the queue and pushed back on the stack. The popped item is

(i) E ()

(ii) B ()

(iii) C ()

(iv) D ()

(j) The initial configuration of a queue is a, b, c, d (a is the front end). To get the configuration d, c, b, a one needs a minimum of

(i) 3 deletions and 2 addition ()

(ii) 3 deletions and 3 additions ()

(iii) 2 deletions and 3 additions ()

(iv) 3 deletions and 4 additions ()

(5)

2. State whether the following statements are True (T) or False (F) : $1 \times 5 = 5$

(a) Printing the value of $\&a$ is same as printing the value of 'a'.

(T / F)

(b) In binary search, the search begins with the element that is located in the middle of the array.

(T / F)

(c) If the address of the 8th element in a link of integer is 1022, then address of the 9th element is 1024.

(T / F)

(d) A tree is a connected graph.

(T / F)

(e) The data structure required to evaluate a postfix expression is a queue.

(T / F)

(6)

SECTION—B

(Marks : 10)

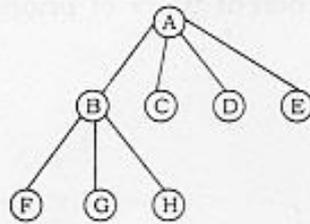

3. Answer the following questions :

2×5=10

(a) Explain BFS.

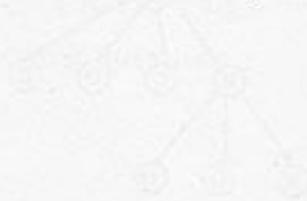

(7)

(b) Convert the following into a binary tree :

(8)

- (c) What do you understand by priority queue?
What are different types of priority queue?

(9)

(d) Write a note on adjacency matrix.

(e) Write a note on arrays of pointers.

III/BCA/301

2013

(3rd Semester)

BACHELOR OF COMPUTER APPLICATION

Paper No. : 301

(Data Structures Using C)

Full Marks : 75

Time : 3 hours

(PART : B—DESCRIPTIVE)

(Marks : 50)

*The figures in the margin indicate full marks
for the questions*

1. (a) How are malloc and calloc different from each other? 3
- (b) Explain the purpose of free() and realloc(). 3
- (c) Distinguish between primitive data structure and nonprimitive data structure giving examples for each. 2

Or

- (d) What are pointers? Explain how to declare a variable as a pointer using suitable example. 3
- (e) How and why do we need to determine the efficiency of algorithms? 2
- (f) Find the final value stored in the variable x , y and z at the end of the following programs : 3

```
void main( )
{
    int x, y, z, *p, *q;
    x=10; y=15; z=20;
    p=4x; q=4z;
    *q=*p+y-3;
    y=y-(*p);
    *p=*q-z;
}
```

2. (a) What is a circular queue? How is it different from an ordinary queue? 2
- (b) Write a C programme for implementing stack using arrays. 6

Or

- (c) Obtain the prefix and postfix expressions for the following : 2+2=4
- (i) $(A + B) * C - ((D - E) ^ (F + G))$
- (ii) $A * B + C / D$

(3)

- (d) Explain the steps involved in evaluating a valid postfix expression using stack by tracing suitable example. 4
3. (a) Explain different types of linked list with the help of suitable diagram. 4
- (b) Write a C program to implement circular linked list. 6

Or

- (c) Bring out the differences between singly linked list and doubly linked list. 3
- (d) Write a C function to delete a node whose info field is specified in a singly linked list. 4
- (e) Write a function to insert a node at the rear end in a doubly linked list. 3
4. (a) How are linear search and binary search different from each other? Write a C program to search for an item using binary search. 2+5=7

Or

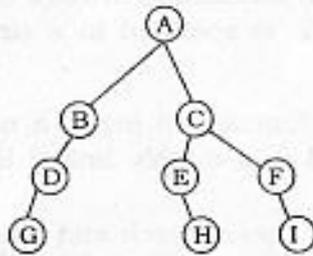

- (b) Write a program to sort numbers using bubble sort. 5
- (c) Write a short note on quicksort. 2

(4)

5. (a) How is a binary search tree different from a binary tree? Write a C program to implement a binary search tree. 2+5=7
- (b) Define the following terminologies : 1×3=3
- (i) Leaf
 - (ii) Height
 - (iii) Sibling

Or

- (c) Traverse the following tree in inorder, preorder and postorder, and write the results : 6

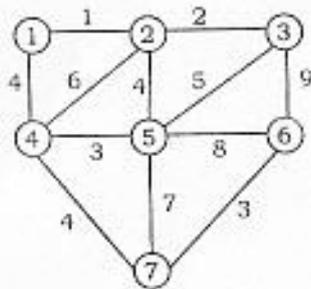

- (d) What are the disadvantages of binary trees? How can they be overcome by using threaded binary tree? 4
6. (a) What are different techniques of representing graphs in computer memory? Explain any two with the help of suitable examples. 7

(5)

Or

(b) Define minimal spanning tree. For the following graph, calculate the minimal spanning tree by using Prim's algorithm.

4

7

l)
